Are you an A+ player with a passion to create world-class products with real, live impact for patients and their caregivers? Are you interested in going above and beyond what you learn in the classroom by working with an open, tight-knit, lightning-paced team to develop the next generation of quality software? Are you passionate about joining a company in its startup stage and building it into a thriving business? If you are, then please send a cover letter and resume to eric@verbalapp.co because we’d love to grab a cup of coffee with you!

You’ll be part of:
- A wicked fast-paced Boston startup that hopes to make a significant dent in the healthcare universe.
- A highly collaborative environment where we get a lot done but also have fun while doing it.
- A transparent organization where everyone’s input is absolutely essential to the success of our business.
- A company that takes pride in whatever we create because we know it has the potential to improve people’s lives. You’ll be hands on with creating patient engagement software that’s the first of its kind and meet with users in order to understand their problems.

We expect you...
- To continually improve your skills on a daily basis so that you can tackle complex problems and get things done.
- To flex your programming skills and help others around you learn and become better.
- To contribute your creativity and personality in order to design and build an human-centric product that pushes the status quo.
- To not be afraid to voice your opinion and to think about how the company can continue to grow and improve.
- To, most importantly, have fun creating a product that enhances the quality of patient care.

Skills and Requirements:
- Current CS/ECE majors who are willing to work at least 10hrs/week
- Must be able to work in Boston, MA.
- High-speed learner with an existing knowledge of web development
- Python experience preferred but proficiency in 2 other languages is also accepted.
- Prior internship experience at a software company.
- Working knowledge of front-end development (HTML5, SASS, CoffeeScript, Backbone.js) is a HUGE plus.
- Database knowledge in MySQL is a plus
- Mobile experience with real time applications is certainly a plus.

If you want to be an awesome addition to our team, please tell us why and send over a copy of your resume.
About Verbal Applications:

At Verbal, we are spearheading a new era of patient engagement by creating a truly remarkable SaaS platform that improves communication between patients and caregivers. Our product is at the forefront of a fundamental change in healthcare IT and has already made an impact in hospitals such as Massachusetts General Hospital and Franciscan Hospital for Children. As Secretary of State John Kerry puts it, “Verbal represents an important next step in the delivery of quality healthcare.”

Our company offers a new kind of cloud software that manages patient and nurse devices in order facilitate interactions and information exchange. Using customizable icons displayed on iPads by the bedside, patients can select from a variety of options to inform care staff of their exact needs prior to the clinician’s arrival. We work tirelessly with patients, doctors, and nurses everyday because in the end, we are all working to improve the quality of care for everyone.
