Systems & Technology Research (STR) is an advanced research and development company specializing in sensor and information processing technologies for military, intelligence and homeland security applications. We have expertise in sensor system engineering, computer vision, multi-sensor data fusion, command and control, software engineering and advanced data analysis methods. Representatives from STR will present a company overview describing the organization, work environment and select applications from each of the company’s five technical groups.

Given the nature of our work (by and large our work is defense related) **US citizenship or permanent residency is required for employment.**

Please RSVP to Theresa Sullivan at tsull@bu.edu

*Pizza and Soda will be served*
