Software Engineer & Data Lover <3 <3

Text is beautiful. Text is powerful. Text is fun. Text is social.

We're a four person social gaming startup comprised of gaming industry and startup veterans. We've been there and done that and we're doing it again.

We're looking for an engineer to join our team. You'll be employee #2. You are a data alchemist. You will own our performance data and metrics.

Responsibilities

‣ Own our performance data and help us make sense of it (there’s a lot and will be crazy amounts more).
‣ Build metrics for our internal use, our business partners, and our investors.
‣ Identify the opportunities and (in)efficiencies that only data can illuminate.
‣ Contribute everyday to the success of our company.

Experience

‣ 0 - 4 years. Show us what you've done, don't tell us.
‣ Code - you've solved real problems by writing real code.
‣ Games - you don't just play games, you love games.

Skills

‣ You need strong statistics - we'll test you. :)
‣ You need solid OO and to have developed in Ruby or Python.
‣ We're a Linux/OSX shop. If you need pictures to click and your OS doesn't come with a native command line ... no dice.
‣ We live on AWS, EC2, Unicorn, and MySQL.
‣ It'd be great if you had hands on experience with R, EventMachine, or MongoDB (or other doc db).
‣ The three R's - reliable, responsible, and respectful.

Education

Computer science, math, physics, stats ... surprise us. Heck you don't even need a degree, or you might have a PhD. We care more about your brain, than the time you spent on any campus.

Compensation / Location

This is a paid, full-time plus position with a real salary and equity. We are located in Cambridge, MA and you need to be too.

If you're keen to learn more, email us at hr@play140.com.
