Job Opening at Hewlett-Packard Houston

Entry Level Power Supply Firmware Engineer

Description

HP’s Industry Standard Server (ISS) group is seeking a highly dynamic and motivated entry level firmware engineer to join the Power Supply team. You will work in a tightly collaborative team within a fast-paced stimulating environment to develop the next generation of HP power solutions, including power supplies, battery backup, UPS, and power distribution units. To support the rapid and widespread growth of computing worldwide, HP develops industry-leading solutions to maximize the efficiency and utilization of power in its server, storage, and networking products. Your fresh perspectives and innovative ideas will facilitate the embodiment of these solutions into new power architectures and firmware. This position is especially appropriate for recent college graduates with career growth potential. Our diverse and dynamic team will help accelerate the utilization of your expertise to solve real-world engineering problems, while achieving your career goals.

Responsibilities

• Develops specifications, test plans, and test programs to verify the firmware interactions within a power solution and overall computing system
• Performs verification testing on new product development samples; identifies, logs, and debugs issues observed
• Develops code and firmware features for power management, enhancements, updates, and changes in a power subsystem.
• Develops understanding of and relationship with internal system teams, ODM power supply development teams, and component vendors.
• Participates as a member of project team(s) with other firmware engineers, hardware engineers and HP partners to develop reliable, cost effective, and high quality power solutions.
• Participates in project design reviews and development meetings.
Qualifications

Education and Experience

• Bachelor's or Master's degree in Electrical Engineering, Computer Science, Computer Engineering, Information Systems, or equivalent

Knowledge and Skills

• Experience and/or familiarity with lab equipment including oscilloscopes, current/voltage probes, power meters, dataloggers, sources, loads, power supplies, soldering/de-soldering, and mechanical tools
• Experience and/or familiarity with embedded microcontrollers such as Microchip, Texas Instruments, Freescale, ST, Maxim, or Silicon Labs
• Experience and/or familiarity with firmware programming languages including LabVIEW, C, C++, Assembly or equivalent
• Experience and/or familiarity with communication protocols including I2C, GPIB, Serial, UART, SPI, RS-232, RS-485, CAN
• Power supply, electronics, and/or hardware development experience is helpful
• Good analytical and problem solving skills
• Understanding of firmware and hardware design principles.
• Understanding of basic testing, coding, release processes, and debugging procedures
• Excellent written and verbal communication skills; mastery in English and local language

Work Authorization

• Must have a legal right to work in the U.S. without sponsorship

Graduation Date

• No later than August 2013

Work Location

• Houston TX 77070 USA
