Lautus Analytics is a Delaware corporation headquartered in Boston, MA. Our goal is to create software solutions that reveal and optimize value for the commercial real estate professional.

We created Lautus Analytics to solve a fundamental problem in the commercial real estate industry: the lack of cloud-based software solutions for commercial real estate professionals. It seemed to us, and many other colleagues we had spoken to, that the commercial real estate industry had somehow been left behind while the rest of the world charged forward in its embrace of new technologies. Today we have one mission, to provide the most comprehensive and sophisticated software solutions to the commercial real estate industry, so that the industry as a whole can advance its analytical and marketing disciplines for the 21st Century.

Lautus Analytics has already partnered with Cushman and Wakefield, Jones Lang LaSalle, CBRE Group Inc. (the three biggest commercial real estate brokerages in America) and Boston Properties (a $16 Billion publicly traded REIT) to beta test our software platform. They have showed serious interest in the product and are considering establishment of corporate contracts upon the immediate release of the platform to the public.

**Job Description:**

New Internet technology startup in the Boston area is searching for a technological cofounder specializing in web development/programming. We are searching for highly motivated and goal-oriented individuals to work alongside our current team. Position calls for the ability to create and modify computer programs by converting project requirements into code. If interested, please read on and then contact us using the contact information.

**Position:**

Co-Founder and Chief Technical Officer (CTO)

**Compensation:**

A negotiable equity stake in the company, Lautus Analytics, and monetary compensation.

**Commitment:**

Initial commitment of no less then 10 hours per week.
Project:
Project calls for the complete front- and back-end development of the Lautus Analytics software platform and marketing site. The software platform development requires the adaptation of a prototype Excel spreadsheet into a web-based application platform.

Experience:
Position requires the use of broad software engineering knowledge and experience to develop innovative software solutions. Expert understanding and experience with the full development life cycle process including: planning, analysis, design, coding, systems and user testing, problem debugging and resolution.

Individual should have extensive knowledge on the following topics, along with proven trouble shooting and conflict resolution skills:

- Front-end Languages (HTML, CSS, JavaScript, Jquery)
- Familiarity with AJAX and JSON
- Server and Database Languages (PHP, MySQL, PHP-Related Frameworks)
- Familiarity with Apache Web Servers, as well as Plesk and CPanel
- Ability to Produce Cross Browser-Compatible Code
- Experience working with database technologies (i.e. - Data Analytics, Data Warehousing) (Amazon AWS or similar experience is a plus)
