Position Title
Back-End Web Developer (Full-Time)

Start Date
Summer 2014

Description
Bioss is a young and rapidly growing biotech company with a global presence.

We are seeking a motivated and talented individual to join our software development team. We at Bioss embrace innovation and creativity. We have an open-minded approach to technology, and strive to create robust, scalable, and maintainable solutions.

As a developer at Bioss, your work will have a significant role in building the company's future. Your input and ideas will be highly valued, and will be part of our lively and innovative atmosphere.

Join us if you are passionate about making a difference!

Responsibilities

- Communicate with company departments to understand requirements and specifications.
- Architect critical business applications and ensure the compatibility of the various components.
- Develop robust software using the latest technologies and practices.
- Perform software testing and quality assurance.
- Continuously improve and expand existing codebase.

Requirements

- Must have experience developing PHP web applications with solid object-oriented principles.
- Experience with MVC Frameworks such as Zend, Symfony, or Laravel.
- Experience in database architecture, implementation, and administration.
- Experience with front-end web technologies including JavaScript, JQuery, AJAX, HTML, and CSS.

Education and Background

- BS in Computer Science or Software Engineering required.
- 1-3 years’ experience in software development.
- Permanent Resident or U.S. Citizen.
